Supporting Information 'Wildlife health perceptions and monitoring practices in globally distributed protected areas'

Methods

Appendix S1. Survey

agree").

Use of SMART to record wildlife health information in protected areas around the world

1.	1. Please enter all the name(s) of the protected area(s) that apply.	*
	If there is more than one protected area(s) name(s), please separate them by hitting enter in the answer space below	

2.	2. Wildlife health, including infectious and non-infectious diseases, is important to achieve the conservation goals of the protected areas where I work	*
	Mark only one oval.	
	Strongly disagree	
	Disagree	
	Somewhat Disagree	
	Neutral	
	Agree	
	Strongly agree	
3.	3. Pathogens carried by wildlife inhabiting the protected area I work in can affect livestock health	*
	Mark only one oval.	
	Strongly disagree	
	Disagree	
	Somewhat Disagree	
	Neutral	
	Agree	
	Strongly agree	

4.	4. Pathogens carried by wildlife inhabiting the protected area I work in can affect public health	*
	Mark only one oval.	
	Strongly disagree	
	Disagree	
	Somewhat Disagree	
	Neutral	
	Agree	
	Strongly agree	
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in Mark only one oval.	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in Mark only one oval. Strongly disagree	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in Mark only one oval. Strongly disagree Disagree	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in Mark only one oval. Strongly disagree Disagree Somewhat Disagree	*
5.	5. Human or livestock pathogens can affect wildlife populations inhabiting the protected area I work in Mark only one oval. Strongly disagree Disagree Somewhat Disagree Neutral	*

6.	6. Introduced domestic animals (e.g., dogs, cats, cattle, pigs, cats) are a concern for the conservation goals of the protected areas where I work		
	Mark only one oval.		
	Strongly disagree		
	Disagree		
	Somewhat Disagree		
	Neutral		
	Agree		
	Strongly agree		
7.	7. Are dead wildlife encountered in the protected area? *		
	Mark only one oval.		
	Always		
	Very frequently		
	Occasionally		
	Sometimes		
	Rarely		
	Very rarely		
	Never		

8.	8. Are sick or injured wildlife encountered in the protected area? *					
	Mark only one oval.					
	Always					
	Very frequently					
	Occasionally					
	Sometimes					
	Rarely					
	Very rarely					
	Never					
9.	9. Are livestock encountered in the protected area? *					
	Mark only one oval.					
	Always					
	Very frequently					
	Occasionally					
	Sometimes					
	Rarely					
	Very rarely					
	Never					
10.	10. How long, on average, are the patrols in the protected area? *					
	Mark only one oval.					
	Less than a day					
	Between one to two days					
	Between two and five days					
	Between four days and a week					

11.	11. On average, how many patrols are completed in the protected area in one month?			
	ease respond to the following questions related to data recorded in SMART (e.g., data ellected by ranger patrols, community members, or other users and managed in SMART)			
12.	12. Are healthy wildlife found during patrols (rangers or others) recorded as a specific category of individuals?	*		
	Mark only one oval.			
	Yes Skip to question 13 No Skip to question 17			
	140 Skip to question 17			
13.	12.a Please select one of the choices below to help us understand how healthy wildlife are recorded during a patrol:	*		
	Mark only one oval.			
	Healthy wildlife are recorded as present/absent (the number of healthy individuals is not specified)			
	Healthy wildlife are counted and reported as part of the full count of individuals belonging to an observed species (e.g. "3 total healthy animals of species X and 2 total healthy animals of species Y")			
	Each healthy animal is recorded as an individual observation			
	Healthy wildlife is recorded in another way			

14.	12.b Please indicate what type of data are recorded (check all that apply) *
	Check all that apply.
	Photographs
	Species
	Age
	Sex
	Body condition
	Other
15.	12.c Are these data entered and stored in SMART Desktop?
	Mark only one oval.
	All of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 17
	Some of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 17
	None of these items are recorded in the corresponding SMART Conservation Area Skip to question 16
16.	12.c.i If none of the items are recorded in the corresponding SMART Conservation Area where are they recorded?
17.	13. Are dead wildlife found during patrols recorded as a specific category of individuals?
	Mark only one oval.
	Yes Skip to question 18
	No Skip to question 22

13.a Please select one of the choices below to help us understand how dead *

18.

	wildlife are recorded during a patrol:			
	Mark only one oval.			
	Dead wildlife are recorded as present/absent (the number of dead individuals is not specified)			
	Dead wildlife are counted and reported as part of the full count of individuals belonging to an observed species (e.g. "3 total dead animals of species X and 2 total dead animals of species Y").			
	Each dead animal is recorded as an individual observation			
	Dead wildlife is recorded in another way			
10				
19.	13.b Please indicate what type of data are recorded (check all that apply) *			
	Check all that apply.			
	Photographs			
	Species			
	☐ Age Sex			
	Carcass condition			
	Anomalies in carcass (if any)			
	Suspect cause of death			
	Other			
20.	13.c Are these data entered and stored in SMART Desktop? *			
	Mark only one oval.			
	All of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 22			
	Some of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 22			
	None of these items are recorded in the corresponding SMART Conservation Area Skip to question 21			

	e of the items are recorded in the corresponding SMART on Area where are they recorded?	*
14. Are injui	red wildlife found during patrols recorded as a specific category	*
Mark only on	e oval.	
Yes		
No	Skip to question 27	
	select one of the choices below to help us understand how life are recorded during a patrol:	*
Mark only on	e oval.	
Injured not specified	wildlife are recorded as present/absent (the number of injured individuals is	
belonging to	wildlife are counted and reported as part of the full count of individuals an observed species (e.g. "3 total injured animals of species X and 2 total als of species Y").	
Each in	jured animal is recorded as an individual observation	
Injured	wildlife is recorded in another way	
14.b Please	indicate what type of data are recorded (check all that apply) *	
Check all that	apply.

25.	14.c Are these data entered and stored in SMART Desktop? *		
	Mark only one oval.		
	All of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 27		
	Some of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 27		
	None of these items are recorded in the corresponding SMART Conservation Area Skip to question 26		
26.	14.c.i If none of the items are recorded in the corresponding SMART * Conservation Area where are they recorded?		
27.	15. Are sick wildlife found during patrols recorded as a specific category of *individuals?		
	Mark only one oval.		
	Yes Skip to question 28		
	No Skip to question 32		
28.	15.a Please select one of the choices below to help us understand how sick * wildlife are recorded during a patrol:		
	Mark only one oval.		
	Sick wildlife are recorded as present/absent (the number of sick individuals is not specified)		
	Sick wildlife are counted and reported as part of the full count of individuals belonging to an observed species (e.g. "3 total sick animals of species X and 2 total sick animals of species Y").		
	Each sick animal is recorded as an individual observation		
	Sick wildlife is recorded in another way		

29.	15.b Please indicate what type of data are recorded (check all that apply) *
	Check all that apply.
	Photographs
	Species
	Age
	☐ Sex
	Anomalies/signs if any
	Body condition Suspect cause of disease
	Other
30.	15.c Are these data entered and stored in SMART Desktop? *
	Mark only one oval.
	All of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 32
	Some of these items are entered and stored in the corresponding SMART Conservation Area Skip to question 32
	None of these items are recorded in the corresponding SMART Conservation Area Skip to question 31
31.	15.c.i If none of the items are recorded in the corresponding SMART * Conservation Area where are they recorded?
	ease mark "Yes/No" to answer the following estions

32. 16. Are domestic animals found in the protected area (free-ranging, capon a farm)?					
	Mark only one oval.				
	Yes Skip to question 33				
	No Skip to question 37				
33.	17. If observed on a patrol, is the presence of domestic animals recorded? *				
	Mark only one oval.				
	Yes Skip to question 34				
	No Skip to question 37				
34.	17.a Are these data entered in SMART Desktop? *				
	Mark only one oval.				
	Yes				
	○ No				
35.	18. Is the health status of the observed domestic animals recorded (healthy, *sick or injured, dead) recorded?	r			
	Mark only one oval.				
	Yes Skip to question 36				
	No Skip to question 37				
36.	18.a Are these data entered in SMART Desktop? *				
	Mark only one oval.				
	Yes				
	○ No				

	ata are collected on dead, sick, or injured wildlife, please select xplanation(s) for why this information is not collected (check all
Check all the	at apply.
	ick or injured wildlife are seldom found
	d add too much work or time to the patrol disease is not relevant in the protected area
	expertise on how to properly record this information
Never t	hought about it
We use wildlife	the default SMART data model which does not include sick, dead or injure
Wilding

Results

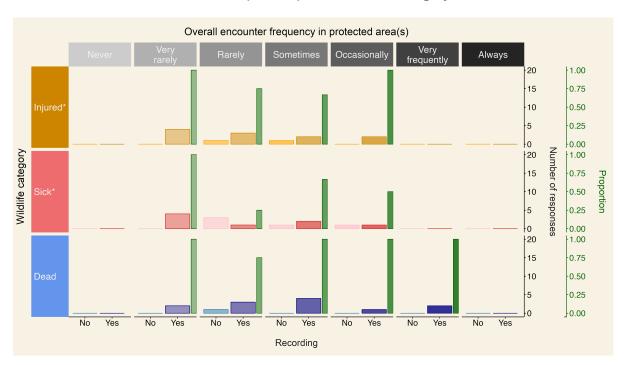

Perceptions of wildlife health importance

Appendix S2. Level of agreement (grey scale) among non-local protected area data managers with the statements "Pathogens carried by wildlife inhabiting the protected area(s) where I work in can affect livestock health." (brown), "Pathogens carried by wildlife inhabiting the protected area(s) where I work in can affect human health." (red), "Human or livestock pathogens can affect wildlife populations inhabiting the protected area(s) where I work in." (blue), and "Wildlife health is important to achieve the conservation goals of the protected area(s) where I work," (green).

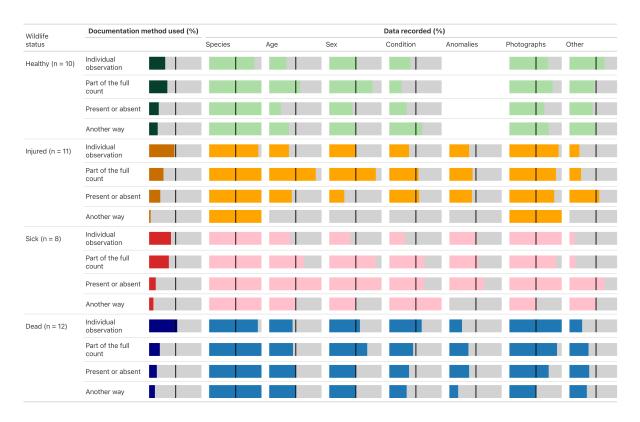

Encounters with injured, sick, or dead wildlife and documentation

Appendix S3. Number of non-local protected area data managers who reported that the health status of and frequency of encounters with wildlife are recorded or not recorded in the protected area they worked in. Green bars represent the proportion of respondents that reported recording of wildlife in each category. Overall frequency of encounters with sick and injured wildlife was requested in a unique question; therefore, rows one and two show the same total number of responses per encounter category.

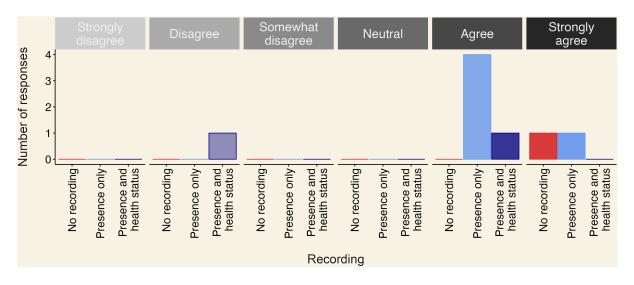

Documentation methods

Appendix S4. Distribution of the methods of documentation (second column) of healthy, sick, injured, or dead wildlife found during ranger patrols as reported by non-local protected area data managers and the recording of specific types of data for each wildlife health status across documentation methods (black line, 50%).

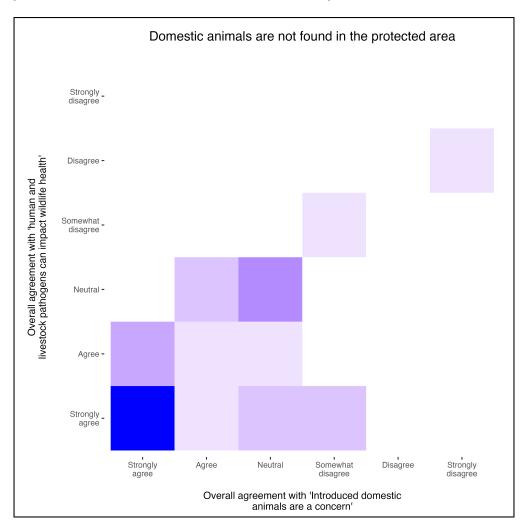

Domestic animals in protected areas

Appendix S5. Responses of non-local protected area data manager to statements that the presence and health of domestic animals in protected areas is a conservation concern (red, no recording of domestic animals; light blue, recording of domestic animals but not their health status; dark blue, recording of domestic animals and their health status). Data are from the group of protected area data managers who reported the presence of domestic animals in the protected area.

Discussion

Appendix S6. Distribution of protected area data managers responses (local and non-local) across their overall agreement with the statements "Human and livestock pathogens can impact wildlife health" and "Introduced domestic animals are a concern for the conservation goals of the protected area" for those protected area managers (local and non-local) that reported the absence of domestic animals in the protected area.

Appendix S7. Distribution of protected area data managers responses (local and non-local) across their overall agreement with "Human and livestock pathogens can impact wildlife health" and "Introduced domestic animals are a concern for the conservation goals of the protected area" for those protected area data managers that reported the presence of domestic animals in the protected area.
